

Tips to Keep Your Android Device Safe

Set a Screen Lock

Setting up a screen lock is important to prevent any unauthorized user from accessing your personal information. You can lock the phone screen using a password, PIN or pattern

Keep Android Device Manage On

Remain prepared, if you ever lose your mobile, the "Android Device Manager" should be set up.

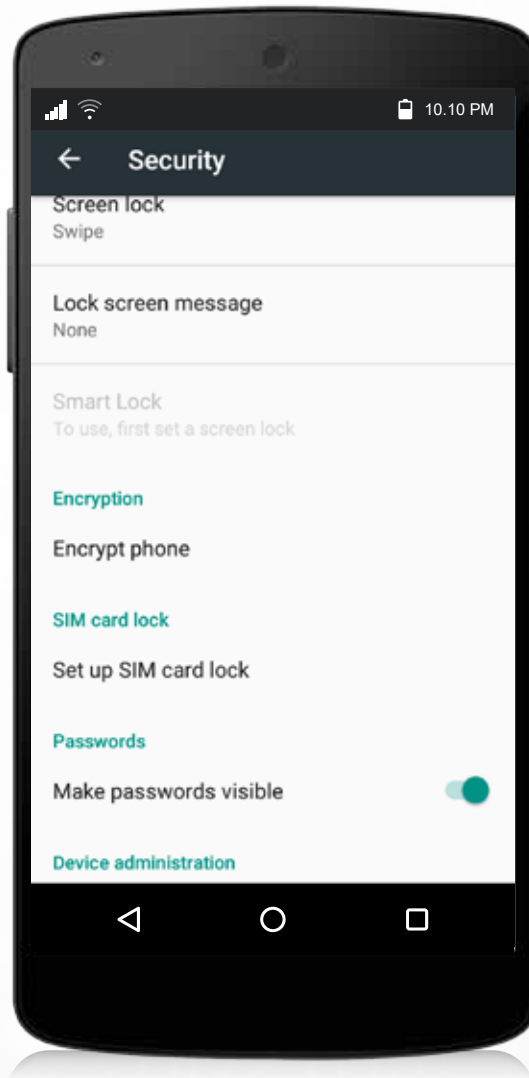

1. Open your device's Settings
2. Under "Personal," tap Google.
3. Under "Services," tap Security.

Now activate "Remotely locate this device" and "Allow remote lock and erase." You need to sign in with your Google account to perform this activity.

Encrypt Your Device

Encryption will help you keep your data protected if you lose your device. If you have Android 4.1 version or higher, you need to go to Settings » Security » Encrypt phone. This will encrypt the data.

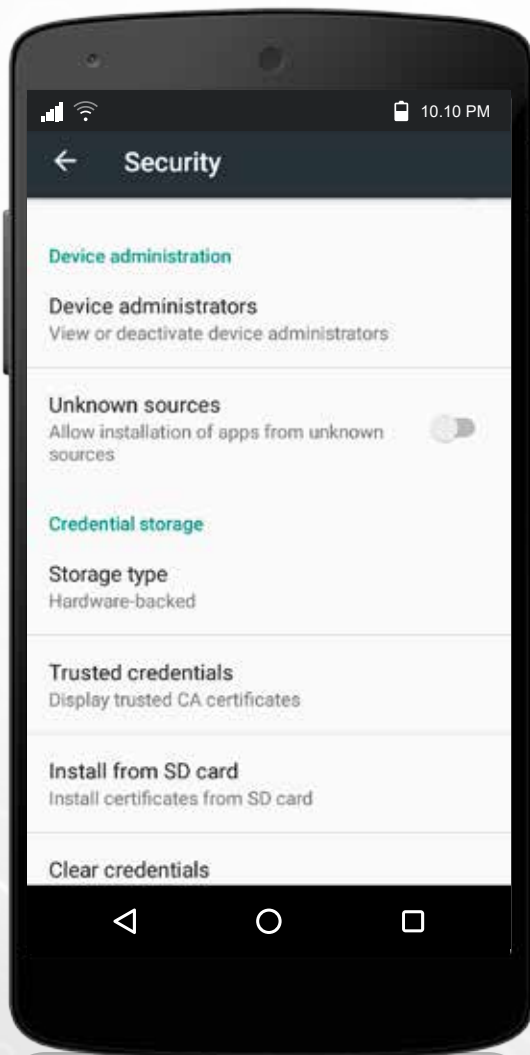

Downloading app from trusted source

Downloading app from trusted source is important as it may compromise the security of your devices. Any time you can download an app from any unknown source by using the "Unknown

Sources" feature. Keeping in mind the security, this feature is disabled but users can manage the settings as per requirement.

- Before you install any app from unknown source, you need to be sure it's a trusted brand.
- Also, check if the app is seeking some private information or device permission that you will not share.
- In order to keep a check on these apps, you can use antivirus software. REVE Mobile Antivirus has Privacy Advisor feature, which allows users to review the permissions granted to these apps.

Prefer Using Chrome Browser

Google Chrome has several inbuilt security features, which keep users safe online. Chrome is updated by Google from time- to-time. Install chrome to update the browser whenever updates are released

Note: There may be some variations in the options as per device. So please choose the closely related items.

Thank You!!
